 TI - Additional rotary brush on floor sweeper - is mounted in bearing which can be tilted on horizontal axis transverse to brush roller rotary axis
 AB - DE2239135 The bearing and drive assembly for an additional brush has a bearing for a vertical axis and a brush rim protruding from the sweeper side. An independent control provides rotary motion for the brush rim, where direction depends on the sweeper travel direction, as in 2134493.
 - When the floor sweeper has a rotary brush roller (14), transverse to the sweeper direction of travel, the horizontal tilting axis for the bearing body extends transversely to rotation axis of the brush roller.
 IW - ADD ROTATING BRUSH FLOOR SWEEP MOUNT BEARING CAN TILT HORIZONTAL AXIS TRANSVERSE BRUSH ROLL ROTATING AXIS
